

Petra Risk Assessment — Documentation & Handoff Guide

Last updated: July 2026

This guide is written for Petra leadership. It covers four things:

1. **What this is and where it lives** — the app, the code, the services it depends on.
2. **The questions and answers** — every question a client is asked, with all answer choices.
3. **How to edit the text** — the process for changing any wording, step by step.
4. **Access and continuity** — how Petra keeps control of the code and the live site if the person who built it ever leaves.

1. What this is and where it lives

What it is: A web-based Risk Alignment Assessment. A client (or a couple) answers a series of questions, and the app produces a Risk Alignment Score (0–100), a risk band (e.g. "Balanced Growth"), and a written summary. Results are shown on screen, emailed to the client and to Petra, and attached as a PDF.

Where the pieces live:

Piece	Service	What it is	Notes
The code	GitHub	<code>cleowblankinship-tech/petra-risk-app</code>	The single source of truth. URL: https://github.com/cleowblankinship-tech/petra-risk-app
The live website	Vercel	Hosts the app and serves it to clients	Connected to the GitHub repo. Publishing a change to GitHub updates the live site.
Email delivery	Postmark	Sends result emails to clients and to Petra	Configured with an API token and sender address (see below).
Web address (domain)	<code>risk.petrafinacial.com</code>	The intended public address	Currently disconnected due to DNS ownership changes; the app also works from its Vercel address. See <code>POSTMARK_SETUP.md</code> .

How a client's results flow through the system:

1. Client completes the assessment on the website.
2. The app calculates the score and shows results on screen.
3. The app sends the results (with a PDF) by email — to Petra's advisor inbox, and to the client if they opted in.
4. Petra can also open a secure review link, or use the on-screen **Advisor View** (unlocked by a passcode — see **Section 4**).

Key files, in plain terms (all in the repo):

File	What's in it
<code>script.js</code>	The brain of the app — the questions, the scoring, and the written result summaries.
<code>index.html</code>	The page layout and the fixed on-screen text (headings, explanations, disclaimers).
<code>email-template.html / api/sendResults.js</code>	The wording and layout of the emails.
<code>pdf-generator.js / api/templates/results-pdf.html</code>	The wording and layout of the PDF.
<code>style.css / style-additions.css</code>	Colors, fonts, and visual styling.
<code>DATA_STRUCTURE.md</code>	A technical "single source of truth" reference for how scores and text stay consistent across screen, email, and PDF.
<code>POSTMARK_SETUP.md</code>	Step-by-step email configuration and the plan to reconnect the custom domain.

2. The questions and answers

The assessment asks **32 questions**, shown in three sections in this order. The list below is exactly what a client sees. (Wording is stored in `script.js`, starting around line 290, in a block called `questions`.)

For rating-scale questions, the answer choices are shown left-to-right as a 1–5 scale. For "choose one" questions, the choices are listed. The **Investment Knowledge** section has right/wrong answers — those are marked, but note they are a **diagnostic only and do not change the client's Risk Alignment Score**.

Section 1 — Investment Mindset (17 questions)

1. If you try a new restaurant and it's disappointing, how likely are you to try another new place next time?

- Very unlikely — I'll stick to places I know
- Somewhat hesitant but might try again
- Still willing to explore new places

2. When a favorite restaurant changes its menu, how do you react?

- Excited to try new options
- Mixed feelings — some curiosity, some disappointment
- Disappointed — I liked the old menu

3. When assembling furniture or a home project, how often do you read the instructions first?

- Always read instructions thoroughly first
- Skim instructions or refer to them as needed
- Rarely read instructions — figure it out as I go

4. When choosing a new show or book, how much does popularity influence you?

- I prefer to discover things on my own
- Popularity is one factor among many
- I often choose what's popular or trending

5. When traveling, which best describes you?

- I love exploring new places and experiences
- I mix familiar comforts with some new experiences
- I prefer familiar places and routines

6. If you're running late, how likely are you to assume you'll still make it?

- Very likely — I usually think I can make it
- Sometimes optimistic, sometimes realistic
- Usually realistic about being late

7. With a gift card, do you buy something you need, something fun, or often forget it?

- Use it for something practical I need
- Buy something fun or special
- Often forget about it or let it expire

8. When information contradicts my view, I...

- Tend to dismiss it or look for information that supports my view
- Feel uncomfortable but don't always change my mind
- Consider it carefully and sometimes adjust my view
- Actively seek out and carefully consider opposing viewpoints

9. I feel more confident in decisions when many others are doing the same.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

10. If you've had two rainy weekends in a row, how much would you agree with planning an outdoor event this weekend?

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

11. When reviewing market updates or investment commentary, I notice that I am drawn to sources that confirm my current views.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

12. My family tends to live into their late 80s or 90s.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree
- (Planning flag — helps flag longevity considerations for the advisor.)

13. I expect I may need to support loved ones financially or with caregiving.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree
- (Planning flag — helps flag caregiving considerations for the advisor.)

14. If you receive a \$5,000 tax refund, what are you most likely to do?

- Spend it quickly on something I want
- Use it for immediate needs or small purchases
- Split between spending and saving
- Save most of it for future goals
- Invest it or add to long-term savings

15. How confident are you in your ability to spot a 'good investment'?

- Rating scale: Not at all confident → Slightly confident → Moderately confident → Very confident → Extremely confident

16. When you experience investment losses, what do you typically do?

- Sell immediately to prevent further losses
- Consider selling but often wait to see if it recovers
- Hold and reassess based on fundamentals
- View it as a buying opportunity if fundamentals are strong

17. When making investment decisions, how much do you let recent performance sway you?

- I focus on long-term fundamentals, not recent performance
- Recent performance has some influence on my decisions
- Recent performance significantly influences my choices
- I primarily base decisions on what's performed well recently

Section 2 — Traditional Risk Assessment (7 questions)

1. If your long-term portfolio dropped 25% and financial headlines were negative, which response fits you best?

- Rating scale: Move to cash immediately → Reduce exposure → Wait before making any changes → Stay invested but uneasy → Stay invested confidently

2. Choose between: A) 6% average annual return with a –20% worst year; B) 9% average annual return with a –35% worst year. How likely are you to choose B?

- Rating scale: Definitely A → Probably A → Unsure → Probably B → Definitely B

3. When markets swing sharply, I feel...

- Rating scale: Very anxious → Somewhat anxious → Neutral → Somewhat excited → Very excited

4. I would stick with my long-term plan during a significant decline.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

5. When will you likely begin using a significant portion of this money?

- Rating scale: Within 1 year → In 1–3 years → In 4–7 years → In 8–15 years → More than 15 years

6. Experiencing several losing months in a row would not lead me to abandon my long-term strategy.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

7. I am willing to accept large temporary losses in pursuit of higher long-term returns.

- Rating scale: Strongly disagree → Disagree → Neutral → Agree → Strongly agree

Section 3 — Investment Knowledge (8 questions)

This section is a diagnostic overlay for the advisor. It does not affect the Risk Alignment Score.

1. How comfortable are you with financial terminology and concepts (e.g., stocks, bonds, commodities, volatility, inflation, diversification, dollar-cost averaging, etc.)?

- Rating scale: Not comfortable → Slightly → Moderately → Very → Extremely

2. How confident are you evaluating a new investment for fit?

- Rating scale: Not confident → Slightly → Moderately → Confident → Very confident

3. Over a 20-year period, which approach has historically been most effective at protecting purchasing power?

- Savings account paying 2%
- Gold
- Cash kept in a safe
- Certificate of Deposit (CD)
- Just stocks (correct)

4. Which best describes diversification?

- Guarantees no loss
- Spreads risk across investments (correct)
- Higher return with no extra risk
- Mainly for short-term investors

5. In general, higher potential return means:

- Lower risk
- Same risk
- Higher risk (correct)
- No relationship

6. If the stock market falls 15% in a month, which is most accurate?

- Sell quickly before more losses
- Market swings are expected over the long term (correct)
- Market won't recover
- Do what most investors are doing

7. If interest rates rise, what happens to existing bond prices?

- They rise
- Stay the same
- They fall (correct)
- No impact

8. Which best describes your investing experience? (Choose all that apply)

- Never beyond savings or CDs
- Mutual funds / ETFs
- Traded stocks or bonds
- Individual stocks
- Options or derivatives
- Alternative investments (real estate, private credit, commodities, etc.)

The result summaries (written text)

After the questions, the app shows five written sections. These are **generated by the app** from the client's answers, so they are not fixed sentences — they change based on the responses. The section headings are:

1. What Your Score Reflects
2. Behavioral Tendencies and Investment Mindset
3. Time Horizon and Risk Capacity
4. How These Elements Work Together
5. How Petra Uses This Information

If leadership ever wants to change how these summaries read, that is a text change in `script.js` (see the note in the next section about generated text). The fixed headings and explanatory paragraphs are in `index.html`.

3. How to edit any of the text

Any wording in the app can be changed. **Where** you change it depends on which text it is:

Text you want to change	File to edit
A question or an answer choice	<code>script.js</code> (the <code>questions</code> block near line 290)
A fixed on-screen heading, explanation, or disclaimer	<code>index.html</code>
The wording of the emailed results	<code>email-template.html</code> and/or <code>api/sendResults.js</code>
The wording of the PDF	<code>pdf-generator.js</code> and/or <code>api/templates/results-pdf.html</code>
The generated result summaries (the five sections above)	<code>script.js</code> (the functions <code>generateOverallSummary</code> , <code>generateMindsetInsight</code> , <code>generateTraditionalInsight</code> , <code>generateAlignmentCheck</code> , <code>generatePlanningRelevance</code>)

Important: The score summaries, emails, and PDF are designed to pull from the same source so they stay consistent. Before changing generated summary text, read `DATA_STRUCTURE.md` — it explains how to change wording in one place so the screen, email, and PDF all stay in sync.

The simple way — editing directly on GitHub (no software to install)

This works well for small wording changes (fixing a typo, rewording a question).

1. Go to <https://github.com/cleowblankinship-tech/petra-risk-app>.
2. Click the file you want to change (e.g. `script.js`).
3. Click the **pencil icon** (, "Edit this file") in the top-right of the file view.
4. Use your browser's **Find** (Ctrl-F / Cmd-F) to locate the exact text. Change only the words between the quotation marks — leave the surrounding code (commas, brackets, quotes) alone.
5. Scroll down, add a short note describing the change (e.g. "Reworded restaurant question"), and click **Commit changes**.
6. If asked whether to commit to `main` directly or open a "pull request," committing to `main` publishes it; a pull request lets someone review it first. For a small fix, committing to `main` is fine.
7. The live site updates automatically a minute or two later (Vercel rebuilds when `main` changes). Refresh the site to confirm.

Tip: Change text only — the words inside quotes. If you accidentally delete a quote mark, comma, or bracket, the app can break. When in doubt, make one small change, publish, and check the site before making the next one.

The developer way — for a technical person

Clone the repo, edit locally, and push:

```
git clone https://github.com/cleowblankinship-tech/petra-risk-app.git
cd petra-risk-app
npm install           # installs dependencies (jsPDF, Postmark)
npm run dev           # runs the site locally via Vercel to preview changes
# ...make edits...
git add -A
git commit -m "Describe the change"
git push
```

Pushing to `main` triggers a Vercel deployment. For anything larger than a wording tweak, open a pull request so the change can be reviewed before it goes live.

After any edit — quick checklist

- The live site loads and the changed text appears.

- If you changed a question, run through the assessment once to confirm it still calculates a score.
 - If you changed email or PDF text, send yourself a test result to confirm formatting.
-

4. Access and continuity (if someone leaves)

This is the most important section for leadership. Today the app depends on a handful of online accounts. If the person who set them up became unavailable, **Petra needs to already have its own access**. Below is what exists and what to secure.

Action items for leadership to secure now

- 1. The GitHub repository is currently under an individual account** ([cleowblankinship-tech](#)), not a Petra-owned organization. This is the single biggest continuity risk. Recommended fixes, in order of preference:
 - **Best:** Create a Petra-owned GitHub Organization and **transfer** this repository into it, so ownership belongs to the company, not a person.
 - **At minimum:** Add a second Petra-controlled GitHub account as an **Owner/Admin** of the repository, and make sure a Petra email address can recover the account.
- 2. Vercel** (the hosting): confirm the Vercel account/team that hosts the live site is owned by Petra, or add a Petra-controlled account as a member with admin rights. Vercel is linked to the GitHub repo, so whoever controls GitHub effectively controls deployments.
- 3. Postmark** (the email service): confirm Petra controls the Postmark account and knows where the **API token** and **sender address** are stored. These live as environment variables in Vercel ([POSTMARK_SERVER_TOKEN](#), [POSTMARK_FROM](#), [ADVISOR_EMAIL](#)). See [POSTMARK_SETUP.md](#).
- 4. The domain** [risk.petrafinanciam.com](#): confirm Petra controls the DNS for [petrafinanciam.com](#) so the custom web address can be reconnected. The reconnection steps are documented in [POSTMARK_SETUP.md](#).

What Petra would need to take over the code

Because the code lives in Git (a version-control system), **the entire app — every file and its full history — can be copied in one command** by anyone with access:

```
git clone https://github.com/cleowblankinship-tech/petra-risk-app.git
```

As long as at least one Petra-controlled account has access to the repository (see action item #1), the code can never be lost. It is not trapped on any individual's computer — the authoritative copy is on GitHub, and it can be cloned, transferred, or handed to a new developer at any time.

A practical safety net: periodically download a full copy of the repository (GitHub → **Code** → **Download ZIP**, or a `git clone`) and store it somewhere Petra controls, such as a company drive. This guarantees an offline backup even if account access lapses.

The list of accounts to hand over

If the current maintainer ever leaves, the handover checklist is:

Account / service	What to transfer	Where it's documented
GitHub	Ownership/admin of <code>petra-risk-app</code>	This document
Vercel	Team/project ownership + environment variables	<code>POSTMARK_SETUP.md</code> , <code>.env.example</code>
Postmark	Account login + API token	<code>POSTMARK_SETUP.md</code>
Domain / DNS	Control of <code>petrafinancial.com</code> DNS records	<code>POSTMARK_SETUP.md</code>

The advisor passcode

The on-screen **Advisor View** (extra detail shown to Petra staff on the results page) is unlocked by a passcode. It is currently set in `script.js` near the top of the file (`ADVISOR_PASSCODE`). Two notes for leadership:

- Make sure the current passcode is recorded somewhere Petra controls (e.g. a shared password manager).
- Because it lives in the site's code, it is a light gate for convenience, not strong security — don't treat the Advisor View as a place for anything truly sensitive, and change the passcode if it's ever shared too widely.

Quick reference

- **Repository:** <https://github.com/cleowblankinship-tech/petra-risk-app>
- **Hosting:** Vercel (auto-deploys when `main` is updated)
- **Email:** Postmark (config in `POSTMARK_SETUP.md` and Vercel environment variables)
- **Intended domain:** `risk.petrafinancial.com` (reconnect steps in `POSTMARK_SETUP.md`)
- **Questions live in:** `script.js` (the `questions` block, ~line 290)
- **Consistency rules for screen/email/PDF text:** `DATA_STRUCTURE.md`
